

# SEAHAWK RESCUE HELMET

Great all-round protection. Suitable for white water and swift water rescue.

The shell drops below the ear for extra protection and helmet stability.

The split-mould injection process creates a very rigid shell and an ergonomic "negative draft" shape that follows the natural curves of the head, protecting the forehead and base of the cranium.

- ABS plastic shell
- ABS plastic extends to ears
- Twist lock adjustment
- Lightweight
- Adjustable side release buckle on chin strap
- Conforms to EN 1385:2012
- Internal adjustable cradle fits heads: 55cm – 62cm
