

HID DRYSUIT

The HID is manufactured from ultra hard-wearing black 375D fabric. Don't expect a considerable amount of excess material, a usual feature of a membrane drysuit, as the Constant Fit Tension Flex system on our technical tri-laminate drysuit fits closely whilst moving in tune with the diver's body.

This system, located at the waist of the drysuit, is a fold of the drysuit's material that extends and retracts as the diver's movements dictate. Should the diver kneel down, reach high, reach back or simply bend forwards, the HID will move effortlessly with them. A removable crotch strap is also included.

The HID is supplied with a neoprene neck seal with a neoprene warmer, latex wrist seals, ultra-durable hard sole boots and our high performance inflation and exhaust valves in the standard positions. All of these parts can be customised if you wish.
