

# DUAL USE 3MM SUIT WETSUIT / UNDERSUIT

This 3mm superstretch neoprene suit is suitable for warmer, more temperate diving environments when using as a wetsuit.

It is also used by our Commercial diving customers as an undersuit. It is worn under the Northern Diver Hotwater suits at great depths as an extra layer to keep them warm.

Many divers are now using the 3mm suit as an additional layer of insulation beneath their drysuits. This has proved useful for those who want to perform deeper dives or dive in colder waters.

Our 3mm suit has proved itself to be an incredibly versatile product, whether you wish to wear it as an undersuit or wetsuit.

It is used not only by the diving community, but also in many other in-water situations where keeping warm is essential.

- 3mm superstretch neoprene
- All black
- Subtle Hotwater logo
- Ndiver logo down left side
- Triple glued, blind stitched seams
- YKK zip at front with protective cover
- Securing Velcro flap at the neck
